GRammar is an art of speaking well.

There be two parts of Rudiment

Elementary

Rudiment is either

The Elementary rudiment, in order of nature and necessity doth goe before the Accidentary: because letters goe before syllables, syllables before words, and words before speech. For of letters are made syllables, of syllables words, and of words Speech.

The Elementary Rudiment is that which treats of the Elements of Speech, viz. A letter, A fyllable,

A word, and the affections thereof.

A Letter is an Element from whence syllables, and words take their beginning. The Larines make use of twenty Letters only.

There are five Vowels a c i o u. All which fometimes doe supply the places of Syllables; and words also, except V. I, and U, vowells are distinguished from I and V confonants, in the forme of writing after this manner, I U. i u. vowells, J. V. j. v. confonants. I. is sometimes a vowell, sometimes a consonant, and sometimes a double consonant, as in this word jejunium. I betwixt two vowells is a double consonant, as in this word, major, unlesse another i immediatly goe before it, as in these words bijuges, quadrijuges.

The halfe Vowells are so called, because they doe

make (as it were) halfe a found by chemfelves.

The Liquids likewise are so called, because they doe sometimes (asit were) melt, (that is) loose

their force and power.

L and R may sometimes look their force, when they next follow a mute, in simple Latine words, as in Atlas, Polucris, but not in compound words, as abluo, obruo, unlesse they concurre with the mute, to the constitution of the Syllable, as Agathocles, Democritus, Locuples. M. and N. look their power in latinated words only, as Tecmessa. Progne. S with the Ancients is said sometimes to melt, (that is)

with all vowells, as Hamus, Hebes, hiatus, homo, humus, hymnus, and therefore much like a conforant it maketh no diffinct found by it selfe, therefore a mute, it hindereth synalepha often, as Ving.

Nec gravius cedit, nec borrens frigore cedit. therefore it feems more then a bare Afpiratio, befides both the Scaligers, losephus and lulius, Pierius, Diomedes, Velius Longus, Valerius Probus, and divers others judge it to be a Confonant: and if it be not fo with the Poers: the figure Cefura is exercised more about this then any other letter, but I will no waies contradict ancient Grammarians. Words that have the letter y. or z. written in them, or beginning with x, are not Latine, but Latinized words, (i) derived of the Greeke, x. and z. in latinized words, and x. in Latine words, are double confomants, because they have the force of two confenants. So that they may be refolved: x. into, g s, as Allobrox, ogis, Rexidis, or rather into c, s, as Thrax, cis, Dux, cis, and z, into double &, as of Maga is made Massa, of patrigo patrisso, or rather into d s, as Gaza Gadfa. Letters are otherwile divided into great and small. Proper names, & those that flow from thence, Names of Arts, the beginings of sentences, and Names of Offices and Dignities, are to be written with great Letters, other swords for the most part are to be written with small. Great letters when they are written by themselves, or some of them togither, are used for these and fuch like words.

An Homogeneous and improper Syllable, is that which is made offerters of the same kind, as of vowells, and that either of one, as in this word, ea, or of two at the most, as a Diprhonge. It is called a Diprhonge, because it hath a double sound, viz. of two vowels. The Latines make use of three Diphongs, e, made of a, and e, written two waies ze, su, of a and u, ce of o, and e.

An Heterogeneous, and proper syllable is that, which is made of letters of diverse kinds, viz. of a

voweil and one or more confonants.

The longest latine Syllable containes five letters, as in this word frangulo, lesse by three, then the longest english Syllable, as in this word frengthned.

The Syllable, ti, when a vowell immediatly followes, is to be pronounced like, fi, except first in the beginning of a word, as tisra, Secondly if f come immediatly before it, as justion. Thirdly in the Instinitive moode that hath a paragogicall addition, as mittier. Fourthly in borrowed words, as Politia, pragmatia.

In dividing of a word in writing, in the end and beginning of lines, the syttable is never to be parted.

The seaventh Accident of a Noune Substantive ore, Declenfion.

Declension is the varying of the first terhe mination of a word into diverse other terminations, called cases.

So that the Nominative is not properly! 2 Case,

me for casus à cadendo, and Aprotes are so called; not pecause they have no case at all, but none falling me from the Nominative. The Nominative is also called the casus; the first whereof is formed immediately is called the casus; the first whereof is formed immediately is called the casus; the first whereof is formed immediately is called the casus. to atly of the Nominative: the rest mediately, as from the Genitive. As the Declension declareth the terminations of every case, so it showeth the Gender his life, these source Rules being prefixed.

Personalls are such as have persons, as Ego Amo.

An Impersonall is that which wants the Primary persons, to wit the first and second: and is used in the third Person, in every Moode and Tense having the figne, it, before his English. The figne, there, is found only in one, as Vacat, for otium eft, there is leafure. Non vacat exiguis rebus adeffe loui. Ovid. As Personalls are not so called, because they have a Nominative before them, but because they have difunct Persons: So Verbs are not called Impersonalls because they have no Nominative, as if they were Innominatives: for they have often a Nominative fet downe, if not one commonly understood, or implyed: yet sometimes without either: as Cicero. Non est ab isto perseveratum, and such like. Nor may they be called Impersonalls like Infinitive Moods, because they have no certaine Person: but because they are destitute of their principall Persons.

Impersonals are either properly so called, which are used allowaies absolutely, (i) not having a Nominative before them, as Libet, Tadet, Pluit, Ningit, of the Active forme: Statur, Fletur, Perseveratum est, Pugnatum est, of the Passive, (which two latter, and others of like sort, are circumsocuted by the Participle of the Prater Tense, signifying a thing past, as Pugnatum est, it hath been fought, and

not by the first Supine: implying a thing to come, Eo Pugnatum, I goe to fight. Or elle improperly which fornetimes are otherwise nsed, and that either in the third Person only, either in the singular number only, as Licet, liquet, Active: Dormitur, Bibitur, Paffive: or plurall, as O portent, Pudent, Penite. bunt, Active; Peccantur, Regnantur, Vigilantur, Pal five: Or in other Persons also not in the Paffive forme, for they never vary: as Luditur, Vivitur: bu in the Active forme, and then they cease to be Verbi Impersonalls, whereof some have been whole Verbs in old time, as Decet, Piget, Miferet: and o ther some in use now, as Juvat, Properat, Miferes cit, Placet, and fuch like. It is most rare that an Impersonal should come of a Verbe Deponent, because they lay afide the Paffive he nification.

Every Verbe is divided into Redundant.

Defective.

Compleat.

Redundants are those that have too much, and Defective, that have too little both which afterward are specified in their due place.

A Complear Verb is a mean betwixt these two extreams, that hath neither too much nor too litle.

A Moode is that which to the fignification of a Verbe, addeth the manner of fignifying, with the change of termination.

For if there be no regard had of the difference of voice and termination, as well as of the manner of fignifying, there will be as many. Moods, as there be affections of the minde, by which we are induced to speake: as the Imperative so may be tearmed a Deprecative, Permissive, Hortative, and Suppositive Moode.

There

here be Sixe Moods Superative.

Infinitive.

The Indicative, of indice, to shew, beause it shewes or declares something to be one or suffered.

The Imperative of impera, to command, ecause it bids or commands, having also he signe set in the third Person singular, and in the first and third Plurall.

The Optative of opto, to wish, because it ath alwaies an Adverbe of wishing afore-

oing.

The Potential, of Potens, of Possum, to nay or can; because the signes of the seveall Tenses of this Moode are, May, Can,

Might, Would, should, or could.

The Subjunctive, of Subjungo, to suboyne, because it is ever subjoyned to anoher verb in the same sentence aforegoing. It is also called the Conjunctive Moode, because commonly it hath some Conjunction immediatly before t, and sometimes an Adverb. One difference beweene the Subjunctive and Potentiall, is that the subjunctive is Englished like the Indicative: not the Potentiall, as, cam amem, when I doe love. The Infinitive, of infinitus, indefinitus, because it signifies to doe, to suffer, and be, indefinitely, & indeterminately, have neither number, person, nor nominative limit it.

A Tense is the difference of a Verb according to the time Præsent, Past, and come.

There be three Tenles Prafent. Prense. or Times Future.

The Prasent Tense speaketh of the time is now is, with the signe, Doe, in the sirst Person I gular, and third Person plurall, in an Active Active-like signification, as Amo, I doe love; but a Passive or Passive-like, am, in the first Person, in the second; is, in the third singular, and, in the three Persons plurall.

The Prater Tense is three fold Praterperfest.
Praterpluperfest.

The Preterimperfect Tense, speaketh of the innot perfectly past, with the signe, Did, in all Person except the second singular, (in which it hath, Di in an Active or Active-like signification, as Amaka I did love. But in a Passive, or Passive-like signification, in the singular, was, and in the plurall, was a Amabar, I was loved.

The Praterperfed Tense speaketh of the in

efiniter, and the third plurall; In the second fingular laft, in the third Hath, in both Active and Paffive gnification, or in Verbs like unto them, as Amavi, have loved: Amatus fum vel fui, I have been oved.

The Praterpluperfest Tenle, speaketh of the me more then perfectly past, with the figne Had, nall Persons (except the second fingular in which hath Hade) in both Active and Paffive fignificatin; or in Verbs like unto them: as Amayeram I had oved. Amatus eram vel fueram, I had been loved.

The Future Tenfe speaketh of the time to come; with the fignification shall or will in all Persons, exepithe second fingular (in which it hath shalt of pile) in both Active and Paffive fignification ; as Imabo, I shall or will love. Amabor, I shall or will eloved. Now the Future in the Active fignification

Imperfect, as, cum Perlegam, when I shall or will read over. Perfect, as, cum Perlegero, when I shall have read over.

There be three Gerunds.

The first endeth in, Di, which resembles the Gehitive case: the second in, Do, the Dative and Abative: the third in, Dum, the Accusative: being the Accidents of Verbs in, o, and Verbs in or, (except Passives which have none) which follow the fignification of the Verbs they come of, being derived of the Present tense; so that they seldome or never have the Passive agnification, unleffe they come of a New. ter Paffive, or by an Archaifme.

There be two Supiner being Accidents also of

the

the same Verbe only.

The first ending in um, followes the fignification of the Verbe whereof it comes, being derived of the Præterperfect Tense, so that it never fignifies Passively, unlesse it be the Supine of a Neuter Passive, at Vapalatum to be beaten.

The latter ends in, u, and hath alwaies the Pal-

five fignification, as Amatu to be loved.

Numbers and Persons are the same with a Pronoune, save that the Description of a Person belongeth properly to this place:

A Person is the special termination of a Verbe in both Numbers.

There are foure Participles belonging to Regular compleat Verbs, two appertains to Verbsino, The Participle of the Prafent Tense, and the Participle of the Future in rus: two belong to a verb Passive, A Participle of the Prater Tense, and a Participle of the Future in Dus; and all foure belong to a Verbe Deponent and Commune; whereof more in its due place.

Regular Complear Verbs have foure Conjugations, which be known after this manners either by the termination of the root, or (more certainly) by the Infinitive Moode, First by the termination of the

roote.

Verbs of the First Conjugation end commonly in, o impure, as Amo: (except some in, o purum, as Beo, Meo, Screo) having the second Person in as, as Amas.

Verbs of the second Conjugation end commonly

The third commonly in o, impure, as Lego (ex-

rept a few in, o purum, as Fodio, Fugio, Capio, Pa-

The fourth commonly in, io as Audio.

2 By the Infinitive Moode infallibly, where Verbs of the first Conjugation have, a, long before, re, and ri, as Amare, Amari. The second hath, e, long before re, and ri, as Docere, Doceri. The third hath e, short before, re, as Legere: whose Infinitive Passive endethin, i, as Legi, having the last consonant of the roote præfixed to it: as Trado, Tradi. The fourth fiath i, long before, re, and ri, as Audire, Mudiri.

Conjugation is the varying of a Verbe, by its severall Moodes, Tenses, & Persons. To the conjugating of compleat Verbs in, o, whether they be Regular, or Irregular, fixe things are requisite: the Present Tense, the Present Tense, the Present Tense, and two Participles, the Participle of the Present Tense; and of the Furure in rus, as

Amo, Amas, Amavi, Amare, Amandi, Amando, Amandum, Amatum, Amatu, Amans, Amaturus,

to Love.

The Forming of a Verb is the assuming of one Person, and varying of the same, throughout all Moods and Tenses.

For the more easy varying and forming of Verbs according to the Moods and Tenses, and for the better parsing of a Lesson, these three rules of Derivation are not unnecessary.

The other Persons of every Tense, some of the

first Person of the same Tense.

of the Present Tense of the Indicative Moode, being the Theame and roote of all, comes the Prz-terimperfect tense, the Prz-terimperfect tense, the Prz-terimperfect of the same Moode; the Prz-serimperfect of all other Moods; as of Amo, is formed, Amabam, Amavi, Amabo, Ama, Amem, Ama-

rem, Amare.

Moode, comes the Præterpluperfect tense of the Indicative Moode, comes the Præterpluperfect tense of the same Moode: the Præterperfect, the Præterpluperfect, and the Future tense of the Optative, Potentiall, and Subjunctive Moode: the Præterperfect and the Præterpluperfect tense of the Infinitive Moode, as of Amavi, are formed Amaveram, Amaverim, Amavero; (by changing i, into ë short) Amavisem, Amavisse; (by keeping, i, still.)

The Præterimperfect tense of this Moode, is not comprehended under the Præsent tense, but under the Præterperfect tense; for we may well say, for F 2

Gaudeo quol Amas, Gandeo te Amere; but not fol Gaudeo quod jam tum amabas, Gaudeo te jam tum amare, but amasse, Neither is the Pratent tense of the Infinitive, by Analogy, put for the Praterimperfect of the Indicative: for mall such expressions, an Virgits, Tum pius, Eneas bumeris abscindere vessiem, there is an Elleipsis of the verbe Capit.

Future Softurum, Seffe, Steach, Shereafter, tense, Auditurum, Soft Heare,

This tente is Periphrasticall, circumlocuted by the Participle of the Future in, rus, and the Infinitive Moode Esse, Fore, or Fuisse: for as the Future tense of the Indicative, so the Puture tense of this Moode is two fold, Impersett and Persett: for, illum has non venditurum esse dico, I say that he will not sell these, is much different from, illum non venditurum suisse dico, I say that he would not have sold them. Cicero. And in this tense, Futures may be added to Futures, as, Cicero. Detade addis, si quid secus, tead me fore Venturum. So in other moodes, as, De omnibus erimus dicturis them Excitandus erit nobis ab inferie, co cidem.

Rules

Rules concerning the Compound Præterperfect tense.

The Compound Verbe hath the same Præterper-

fect tense, that the Simple Verbe hath.

That the Compounds retaine not the Syllable, doubled in the Simple Præterperfect tense; unlesse Præcurro, Excurro, Compungo, Repungo, and the Compounds of Do, Disco, sto, Posco.

Plico compounded with Sub or a Noune, which makes only avi, as Supplico, Multiplico, Suboleo, which makes Subolui: Expungo, which

makes only Expunxi.

The Compounds of Do, of the third Conjugation: as Addo, Credo, Edo, Dedo, Reddo, Perdo, Abdo, Obdo, Condo, Indo, Trado, Prodo, Pendo; which changing the Syllable retained, make, dide; except one Decompound Abscondo, which casts away the doubled syllable.

The Compounds of Sto, which changing the

retained Syllable, make Biti.

Three generall Rules for the changing in Composition.

These simple Verbs, Damno, Lasto, Sacro, Fallo, Arceo, Trasto, Fatiscor, Gradior, Pattor, Partio, Cando, Capto, Patro, Farcio, Scando, Mando, Spargo, Pario; when they be compounded, change the first vowell of the Present and Preserpersect tense, into e, except Pertrasto, Retrasto, which doe not change. So the compounds of Pasco (besides Compesso and Dispesso which make Pescui) The compounds of Pario doe change, but yet differ from their simple G. A. Verbe

Verb, both in the Conjugation and the Praterperfect tenle, two whereof doe make Comperi and Reperi, and the rest, perii: and all of them are of the fourth Conjugation; the simple Verbe being of the third.

Thefe fimple Verbs, Habeo, Lateo, Salio, Staruo, Cado, Ledo, Pango pegi, Cano, Quaro, Cedo, Tango, Egeo, Teneo, Taceo, Sapio, Rapio, & Placeo compounded, change the first vowell into i, in all renles.

Postbaheo, Complateo, Perplaceo, Depango, Op-

pange, Circumpange, Repange.

The compounds of Cano, which doe change indeed, but make ili, in the Præterperfect tenle, as Concino Concinui. The compounds of Calco, which change a, into u, in all tenfes.

The compounds of Claude, Caufo, Quatio,

Lavo, which cast awaya, in all tenses.

Thefe fimple Verbs, Ago, Emo, Sedeo Rego, Fran-20, Capio, Lacio, Lavo, Specio, Premo, doe change the first vowell of the Present tense only into, i.

Coemo, Superfedeo, Perago, Sarago, Circumago two compounds of Rego (Pergo, Surgo) and two of Ago (Cago, Dego) Isoling the middle Syllable of the Present tense.

Facio which changes nothing, unlesse it be

compounded with a Præpofition.

Lego compounded with Ad Per, Pre, Re, Sub, Trans, which change nothing. His other compounds change the first vowell of the Presont Tenfe into i, as Intelligo, Diligo, Negligo, which make Lexi, in the Præterperfect tense, all the reft Legi.

Some Verbs have the Supines, and yet want the Participle of the Future in rus, as Cresco, Soles. And some want the Supines, which have the Future in rus, as Moriturus, Osurus. These Participles Pariturus, Nasciturus, Arguiturus, Eruiturus, Oriturus, Futurus, doe not retaine the Analogy of Derivation:

A Participle of the Future in Dus, hath alwaies the Paffive fignification, as Amandus to be loved, and it is formed of the Genitive case of the Participle of the Præsent tense, by changing, tis, into dus, as A-

mantis, Amandne Legentis, legendus.

Some Participles of the Future in Dus, come of Verbs Neuters, as Carendus, Pudendus, Pigendus, Vigilandus, Regnandus. Participles of the Præsent tense are declined like nounes adjectives of one termination: as Legens, legentis: but iens (in ule with Cicero) and his compounds, doe make Euntu, eunti, Co. in the oblique cases, except Ambiens, ambientis, Participles of other Tenses are varied like Nounes Adjectives of three terminations, as Dostus dosta do. THE SECOND PART of Grammar, is

REGIMENT.

VV Hich is two fold S Plaine, and Figurative.

Plaine Regiment, is a putting and joyning togither of the Parts of Speech amongst themselves, according to the true reason of Grammar. Which likewise is two sold,

The Regiment of Consequency.

The Regiment of Conveniency, is when there is a rection joyned with Concordancy, for in the very agreement it selfe we may observe a governance and dependancy, the Adjective depending on the Substantive, and the Verb ruled by the Nominative case: for we know not how to personate the Verb, till we know the person of the Nominative case.

The Regiment of Consequency is, when there is a Rection joyned with a discrepancy of the words: for in this Regiment, the word governing and the word governed are discrepant and diverse the one from the other, and most commonly the latter followes the

former

former, unlesse it be a Relative, an Interrogative, or an Indefinite, and sometimes another word for the Relatives sake, as Calestis ira quos premit miseros facit, bumana nullos. Seneca. Honores quorum supiditate multi instammantur, quidam contemnunt. Cicero.

There be two Concords. The first is the Conveniency of the Adjective with the Substantive. The Second of the Verb with

the Nominative case.

The Adjective, whether it be Noune, Pronoune, or Participle, agreeth in Cafe, Gender and Number with the Substantive, whether a variable word or invariable, one or moe words supplying the place thereof. A Noune variable, as Rara avis in terris nigroa simillima cygno. Ovid. A Pronoune, as Caufa mea est melior, qui non contraria fovi. Idem. here the Antecedent Substantive to qui, 15 Ego, included in the Possessive mea. A Participle, as Scripta cum mea nemo legat vulgo recitare timentiu. Meos vidift flentis ocellos, and the Substantive to flentis, is mei, included in the possessive nostros, Horat. here the Substantive to timentis, is mei, understood in the Poffe five, mea Thefe examples are to be added to the former of a Pronoune. Eia band veffrum eft iraeundos effe, Terent, there the Substantive to iracundos, is vos, implyed in the possessive Vestrum Omnes laudare fortunas meas qui filium haberem tali ingenio pratitum. Terent. Aninvariable word, as Nil mortalibus arduum. Horat One word, as Scire tuum nibileft, nifi te Scire bot feiat alter. Pers. here the Infinitive moode Sette is the Substantive to tuum. Moe words, as Sedeorum pareim in pompa, parhim in acie, illustres esse voluerunt. Oicero, there an Adverbe with a Genitive case, to wit partim eorum, is the Substantive to illustres. In tempore ad eam veni, quod omnium rerum est primum, Terent, here the whole clause, to wit, in tempore ad eam veni, is the

The Verb agreeth in Number and Person with the Nominative case, whether it be a variable word or invariable, one word or moe bearing the roome thereof. Variable as Nunquam seraest adbonos mores via. Sen Invariable as, Dic mihi cras istud Posthume quando venit. Mart. One word, viz. the Infinitive Moode, as Premonere est premunire, Cato. moe words viz. the whole clause, as Legere is non intelligere est negligere, Idem. An adverbe with a Genitive case, as corum autem ipsorum partim ejusmodi sunt, ut ad universos cives pertineaut, partim ad sungulos attingant. Cicero. The whole clause as

Adde quod ingenuas didiciffe fideliter artes,

Emollit mores, nec finit effe feros.

Toxizate, by vertue of Art, any word or words may supply the place of a Substantive, of the Nominative, and the Accusative case: of the Nominative, as the pracedent examples sufficiently declare: of the Accusative, as Matutinum portat ineptus Ave. Mart.

Quis expedivit Pfittaco fuum Xaipe, Perfius.

The Regiment of a Pronoune, seems altogisher to be supervacaneous, being in every respect correspondent to that of a Noune, whether Substantive or Adjective: all the doubt is, whether Substantive or Adjective, which is easily removed: for besides many other reasons, one seems invincible, to prove it to be an Adjective: For as other Adjectives, coming between two Substantives.

One and she selfe same Verb may governe diverse cases by diverse rules, as Dedit mibi vestem pignori, te prasente, proprià manu. And the same case by diverse reasons, Neroni probis viris crimini vertitur innocentia. Likewise an Adjective, as Oxonium est insignior Lovanio literarum studtis, multis parasangis. Sometimes the Verb in a Periphrase may governe the case of the Verbe, whose signification the Periphrase bears, as Quos non est veritum in ea voluptate, que maximà voluptate sensum movet, summum bonum ponere: that is, quos non puduit. Cicero. Et nunc id operam do, that is, sonor. Terent-Idne estis autores mibi, that is, suadetis. Idem.

As the Verb doth commonly supply the place of a King, ruleing all; so sometimes the roome of a Sub-

The former Supine followeth the fignification of his Verb, and depends upon other Verbs or Participles fignifying Motion to a place, as Spectatum veniunt, veniunt spectentur ut ip fa. Ov. Fortuna cum blanditur captatum venit. Seneca. Te id admonitum veniens patrem tuum convent. Plau.

These have an hidden motion, Costum ego non vapulatum conductus fui, Non tu me argento, opinor dedisti nuptum, sed viro. Plaut. Pamphilum cantatum provocemus Terent. Virginem nuptum Locavi. Id.

The latter Supine hath alwaies the passive fignification, and is governed of Adjectives, as

Nil didu fedum vi suve hec limina tangat. Iuven.

Horrendum factu. I dem. Pudendum dictu. Quintil. Qued optimum factu videbitur, facies. Cicero.

Of the Rection of a Participle.

Participles governe the Cafe of their Verbs, as

in Dum, contrary to the tenent of all Grammarians, therefore had need to be backed with these reasons.

Such passages doe note unto us a thing to be done in the Future time, but Gerunds doe alwaies imply a present time, having the English of the Participle of the present tense and therefore the present tense of the Infinitive Moode, of the Active forme, sometimes is used for the Gerund in Di, as Tempus est incidere for incidendi Virg.

a It must alwaies have a Passive signification, because it still governes a Dative of the Agent, set downe or understood, which scarcely is attributed to any Gerund, much lesse to the Gerund in Dum, whereof Vossius himselse, a man of greatest reading

can hardly finde an instance

If the Future tense of the Infinitive Moode of the Passive forme, be circumlocated by the Pasticiple of the future in dus, as Amandum esse; why not as well amandum ess? but the one is sufficiently proved before, therefore the other must needs follow.

These expressions are paralel and equipollent, to those of the Verball Adjectives in Greeke, both which doe vary, as pinnties, in, tor. Amandus, da, dum, 2; and is, in, tor. Scribendus, da, dum. But Gerunds doe

never vary by changing the termination.

Participles of the Præter tense otherwise have a passive fignification, the word, Haveing, being pre-fixed to them, become Transitives, and governe an Acculative case, as Depasta florem. Ving. Stratus membra. Horat. Vallatus frontem radiv. Ovid.

A Noune or a Pronoune Substantive joyned with a Participle expressed or understood, and having no word whereof it may be governed, is put in the Abdative case Absolute, as

- Nil mortale tenemus

Pectoris excep, is ingenitá, bonis. Ovid. The Participle understood is alwaies existent, as Teg, adeo decus boc ævi, te Consule inibit Pollio. Virg.

Some would have all these and other before menrioned cases to be governed of other words understood by the figure Elleipsis, endeavouring thereby to clip our antient plain Syntaxis, by making it forthe most part Elleiptical: (they straine to crosse it, not strive to crowne it, much to doe to curtaile it, litle to doe to corroborate its they are so addicted to, and affected with Scholia's to fet forth a new, that they produce few or no examples to establish the old, which makes me the more copious in examples) But unles they can shew more sufficient instances, where those words understood are usually expressed. (which as yet is not performed, and for those that be sometime expressed, more and better examples be produced: they must pardon me if I refusero embrace their opinion, especially finding such groffe flips and miftakes in other Grammaticall paffages. I grant a prepolition may be usually understood, but not other words so commonly. I think they can hard-

(140)

hardly finde thele expressions, In solo terre, or humi: In loco domi, and if a Preposition be added to an Ablative case put absolute, it will prove sometimes non-

sence, as Nil mortale tenemus

Petteris except is ingenitif bonis; the Preposition sub, or lany other being added to Bonis,
what sense will it be? Neither can they finde any
Preposition to Rus and Domus, either in the Accusative or Ablative case, with the signes to, or from, prefixed to them. Neither can one example of Apuleius perswade me to think that the Ablative case asber Nounes of the Comparative degree with the
signe then, doe depend upon the Preposition Pra, besides many moe just exceptions may be taken which
I forbeare at this time to mention, fearing to be too
tedious to the Reader, or offensive to the learned
Grammanians.

Of Figurative Regiment.

Figurative Regiment is that which declines and departs from the native and plaine forme or custome of speaking, as also from the most simple and most common Rules of Art.

The Figures pertaining thereouse are foureteen in number. Syllepsis, Prolepsis, Zeugma, Synthesis, Enallage, Elespsis, Pleonasmus, Anastrophe, Hendiadis Hipallage, Hysteron Proteron, Syncrysis, Hetenismus, Archaismus.

Syllepsis, is when a Verb or an Adjective added to many Supposites dothagree with the more worthy, which is two fold. Explicite, when both the supposites are expressed, as si tu exercitus quests.

Cicero.

Cicero. Pater & mater mortui. Terent. Implicite, when both are understood, as Impliciti laquei nu-

dus utera jacet. viz. Mars & Venus. Ovid.

Prolepsis is when the parts are subjected to the whole, and the Verb doth agree with the whole not with the parts, which likewise is two fold. Explicite when both parts are expressed, as

quoniam convenimus ambo,

Ta calamos inflare leves, ego dicere versus. Virg. Compulerantá greges Corydon & Thyrsis in unum, Thyrsis oves, Corydon distentas laste capellas. Idem.

Implicite when one part is understood, as Alter in alterius jastantes lumina vultus,

Querebant taciti nofter ubi effet amor. Ovid.

Zeugma, is when a Verb or an Adjective agreeing, the neerer is reduced to diverse supposites, to one expressely, to the other by supplement, as Tu quid ego or populus mecum desideret, audi. Hor. — Caper tibi Salvus or Hedi. Virg.

Synthesis, is a speech agreeing in sense, but not

in word, as

ejus atatis. Cicero. It clamor calo, for ad Calum. V.
Heu me pater oppresse, (for oppressus) jacet. Senec.
Of number for number, as Singular for Plurall, Hostis habet muros, for hostes habent. Virg. Plural for
singular, as Cur ego in his te conspicor Regionibus,
for in hac Regione. Terentius. Gender for Gender,
as Dulce satis humor, depulsis arbutus hadis.
Lenta salix fato pecori, mihi solus Amyntas. Virg.

Perlon

Person for person, as Si quis me quarit Rufus, prasto est, for prasto sum. Quando eum quastumos ceperis, accipiunda & musuanda injuria adolescentium est, for quando quisocceperit, the second person put for any. The Positive for the Comparative degree, as Paulò qui est homo tolerabilis, for tolerabilior. Terent. Moode for Moode, and Tense for Tense, as Valebis igitur, neg ut à puero fecisti: amabis valebis, for Vale, Ama: Cicero.

Elleip sis, is the defect of a word in sense necessary to lawfull structure, as cum in animo haberet navigandi. Scil. Voluntarem. Cicero. Quamvu ei secundas ferè Grammaticorum consensus deserat. Scil. partes. Quint. Tantamne rem tam negligenter agere? Scil. Oportebat. Terent. Where a conjunction is wanting, it is called Asyndeton, as Dum atas, metus magister prohibebant, where et is wanting. Terent.

Pleonasinus is when one or moe words doe a.

bound in any speech, as.

__ sic ore locuta est, Virg.

Hisce oculis egomet vidi. Terent. By this figure, Sibi, Mibi, Tibi, are sometimes Redundant, used for pleasantnesse, not for necessities sake, as Ingulat hominem, suo sibigladio. Terent. Qui mihi, ubi ad uxores ventum est, tum siunt Senes. Idem. Fac tibi paterne legis tue in mentem veniat. Cicero. The Redundancy of a conjunction is called Polysyndeton, as Ego pol quog etiam timida Sum, Terent.

Anastrophe is the preposterous order of words, as

Nam vitiu nemo fine nascitur. Horat.

Hendiadis, is when one's expressed by tero, as Pateris libamus & aure, for aureis Pateris. Virg.

Hypalage, is an inverted order of Regiment, as Ibant obscuri sola sub noche per umbras, for Soli sub

obscura nocte. Virg. In nova fert animus mutatas dicere formas. Corpora, for in novas formas mutata

Corpora. Ovid.

Hysteron Proteron, is when that which ought to be put in the second place is put in the former, as Moriamur & in media arma ruamus, for in media armaruamus & moriamur. Virg.

Syncrysis is when words that belong to diverse parts of a sentence, are so mingled, that the whole speech thereupon becomes obscure and confused, as Namá pila lippis inimicum & ludere crudis, for

Ludere pila est inimicum lippis & Crudu.

An Hellenisme, is when a word is not joyned to that case which the Latine, but which the Greeke propriety requires, as De fine mollium tandem querelarum, Hor.

An Archaisme here is the manner of Regiment in use with the Ancient, which now is obsolete, as Quid tibi hanc rem curatio eft? Plautus. With the Ancients Verballs in, tio, did governe the case of their Verbs.

A Direction for exposition.

Hen you are to expound a piece of Latine. You must first read the sentence plainly and diffinally to a full point, Secondly, you must marke all the points as Commaes, Colons, Interogations, &c. and all proper names, which are written in great letters, and the Parentheles, which are alwaies conftrued by themselves. Thirdly you must firk begin with the Vocative case if there be any, or whatfoeverisin freed of it, or depends on it. Fourthly you must seek out the principall verb, and his Nominative cases and take first the Nominative, and that which hangeth on it, as an Adjective, then the Verb with the Adverb and Infinitive moode which depends onit, next the Accusative case, or such as the Verb properly governeth, Lastly the other cases in order: viz. First the Genitive case, then the Dative, afterward the Ablative. The Substantive and Adjective must be expounded togither, except the Adjective doe governe some other word, or have some other word joyned to it into which it passeth his fignification, and the prepofition must be joyned with his case. Yet this order is often altered by Interrogatives, Relatives, Partitives, certaine Adverbs, and Conjunctions. Therefore marke whether the fentence be interrogative, or begin with an Adverbe, or Conjunction, as Ubi eft frater tuus? Quo die litteras accepifti? Quot putas effe in bac urbe pauperes? Atqui fic preceptor decuit. Non ignoro.

Directions

泰美辛辛辛辛森燕燕燕燕燕秦辛辛辛

Direction for the translating of English into Latine.

Ethat will goe above to turne English into Latine, must first be enabled to examine, judge, and determine of every word, as well litle as great, whether it be a bare figne (for which no Latine word is allotted) or any of the eight parts of speech; and if it be, whether it be a Noune or a Verb. For in these two (as of the Latine, (o) the substance of every language confifteth principally; and these are more difficult to be atsained then the reft, because the other parts of speech being for the most part finite and numerable, are more casy to be Learned and observed, but these two being infinite and innumerable, are harder to be knowne and remembred. For thy more facility in discerning of all, both small and great, signe and substance, make wie of thefe few short notes.

A Noune is the compellation of a thing Substantiall or Accidentall, without any difference of Person, (whereby it is distinguished from a Pronoune), or time, (whereby it is differenced from a Verb.)

A Noune is two fold Substantive.

CAdjective.

Both which are infallibly discerned, by placing the word Thing, immediatly after it in thy minde: for if it be an Adjective, it will aptly stand after it in sence;

But

But if a Subflantive it will be fenfeleffe.

A Noune Adjective hath two degrees of Comparison: the fignes of the former being the Comparative, are More, or Er, in the end of the English of the Politive word, as more hard, barder. And the latter being the Superlative, are most, or est in the end of the English of the Politive word, as most hard or bardest, and so the word (very) unlesse it be prefixed to a Substantive, and then it is the English of, Ipse.

A Pronoune is a part of speech, finite, the number whereof amounts to 64, and therefore they with their severall fignifications may easily be committed

to memory.

A verb is knowne by his three fold fignification, to

doe, to fuffer, and to be.

Participles like unto verbs, are Infinite, but they are reduced unto foure heads: two whereof, are known by their terminations in English and Latine, as a Participle of the present tense hath his English ending in ing: and his Latine in, ans or ens. A pastiple of the Præter tense hath his English ending in, d, t, or n, and sometimes in ing, being the Participle of a Deponent, and his Latine, in two, sus, The other are known by their Latine terminations and fignifications, as the first future ends in rus, and hath the Active or Active-like fignifications: the second in dus, and hath alwaies the passive.

An Adverbe is partly finite and partly infinite, So farre forth as it is infinite, it comes usually of a Noune, and is known commonly by the English ending in ly, a few Adjectives being excepted, as godly, holy, daily, unruly, and is an Adverb of quality. So farre forth as it is finite and usuall (the number)

A Conjunction is finite, the number whereof amounts to fome, 71.

A Præposition is finite, the number y hereof is a-

Interjections that are usuall are finite, the number of them being about 21. and therefore thele

three parts of speech may easily be learned.

When an English is to be made in Latine, first looke out the Principall verb : for the verb is as it were a King that ruleth all, the Cases are as it were the Subjects attending upon it. The nominative cometh before, and is fometimes fet after; the Acculative commonly followeth the Verb, the other cases are governed. If there be moe Verbs then one in a fentence, that is the principall Verb, which is neither the Infinitive Moode, nor hath before it a Relative, as, that, who, whom, which; nor any Adverba of time, as when, after that, untill, as long as, fo foone as, whilest that: nor any Conjunction copuative or disjunctive, not being the first word of a entence ; nor any of these Conjunctions causalls, as because, seeing that, so that, for as much as; nor this Adversarive although; nor any of these conditionalls, if, but if, fo that; Nor any of the Exceptives unleffe, but that.

When ye have found the Verb, aske the question who or what? and the word that answereth to the question, shall be the Nominative to the Verb. And after the same manner , ye shall finde out the Substantive to the Adjective, whether it be Noune,

Pronquine or Participle.

The property of the Nominative Case is to come before the Verb personall; for a Verb impersonall will will a dmit of no Nominhtive.

The Nominative case may come after the Verb is these source expressions. I When a Verb is of the Imperative Moode and second person, as Read thou, Read yee. I When a question is asked, as, Readest thou? I when a question is asked, as, Readest thou? I when the signes, it, or there, are used, as it is my booke, there came one to mee. I when we meet with a Verb substantive, or with any Verb of the like sort, which will have a Nominative case on both sides, as Correction is Instruction.

When it the Relative and Interrogative come before the Infi-Attinitive Moode, they are expressed without the signe (that) which is plainly discovered by turning them may into the Pronoune Article of the same case.

The Vocative case is knowne by the signe, O.

For, is the figne of the Ablative case, of the cause: and the fignification of the Præpositions, In, Ad, Pro, Propter: and of the Dative case (as afore said) in the begining of a Sentence, it is the English of a Conjunction causall: it is also parcell of the Egnisication of these Verbs, Expecto I looke for; Spero I hope for, Operior I stay for, Accerso, Arcesso I send for: Curo I care for: Investigo I seeke for, &c. governing an Accusative case.

ons of the Verbs, and the fignes thereof, the fignes of the Moodes and Tenfes are exactly to be known.

The fignification of every Verb, whether it be Personall or Impersonall, compleat or defective, Regular or Irregular, Simple or Compound, Primitive or Derivative, Active, Passive, Neuter, Deponent, Neuter-active, or Neuter-passive, may be reduced to these three Active, Passive and Neutrall.

Doe, dost, or Est, doth or eth, did or didst, immediatly comming before the English of a Verb, are commonly signes of a true Active signification, but the infallible signe is that it cannot be surned into the Passive.

Am, art, 4, are, was, were, bin, bee, immediatly coming before the English of a Verb, are commonly the fignes of a true Passive fignification: But there be three infallible fignes thereof. Two immediatly after the English of a Verb, as principally and frequently, of and by sometimes having the case of the Agent annexed to them, otherwise the latter may fometime be the figne of the instrument, as in this faying (of God we are fuftained by foode) and the former sometimes the figne of the case, that the Verb properly governes, as thou shalt be deprived of this burden. The third is that it may be turned into the Active; for Active and Pathive are Relatives by nature, the one cannot subsist or have any denomination without the other, and they are reciprocally convertible:

The Neutrall is two fold, either 'active-like, as Curro I run, or Passive like, as Egroto I am sicks when it is Active-like, it hath the signes of the active, when Passive-like, the signes of the Passive; but the infallable signe is, that it can never be turned into a true passive forme.

The fignes of the Moodes are thefe.

The figne of the Indicative Moode is, that it hath no figne, it only shewes and barely affirmes. The figne of the Imperative mood is bidding and commanding, and sometimes let.

The figne of the Optative Moode is an Adverb of

withing.

The fignes of the Potentiall Moode are, May, can, might, could, would, should, or ought.

The figne of the Subjunctive Moode, is a Conjun-

Hien; and lometime an Adverb.

When

When a Verb commeth immediatly after the English of these words, being not Interrogatives or Relatives, as qui que quod, quis quid, who or what, quantus, how great, (if tantus, so great, goe not before) qualis, what an one (if talls such an one, goe not before) quemadmodum, quam how, cur, quamobrem, why, wherfore; Uter, num, nunquis, and ne at the end of a word, whether, quor sum, to what end, ubit where, quò whether, unde from whence, it must be put in the Subjunctive Moode allwaies, subjoyned to another Verb going before, ser downe or understood, consider who thou art, Qui sis considera; see what sweetnesse is in thee, Vide quanta st in te suarvitas.

The infinitive moode is knowne commonly by

the figne, to.

The fignes of the Tenses in both Active and Passive voice, are such as you may finde in its due place in the Grammer, where the Tenses are described.

Where note, that the sirst person is more worthy then the second, the second more worthy then the second, the second more worthy then the third.

thou shalt be my husband; tu mihi frater eris, thou shalt be my brother: and that the nominative case of the third person in Verbs, whose significations belong only to men, is often understood, as Est heis, Ferturit is reported, Dicunt, Aiunt, Ferunt, they say, Predicant, Clamitant, they note, &c.

When a Verb cometh between two Nominatives of diverse numbers, the Verb may indifferently but figuratively accord with either of them, so that they be both one person, as the falling out of lovers

is the renewing of love.

Many Substantives fingular having a conjunction copulative coming between them, figuratively will have an Adjective plurall; which Adjective plurall shall agree with the Substantive of the most worthy gender, as Rex & Regina beati, Calybs & Aurum funt in fornace probati, Leges & plebifcita funt violate. Where note that the Masculine gender is more worthy then the Feminine, and the Feminine more worthy then the Neuter, unleffe in things not apt to have life, wherein the Neuter is most worthy; in so much that the Adjective is put in the Newter gender, although the Substantive be Masculine or Feminine, and none of them the Neuter: When a fentence or a clause goeth before, the Adjective shall be pur in the Neuter gender; and if two or more, then it shall be put in the plurall number.

Adjectives which have a double termination in the Ablative case, are not promiscuously to be used, but commonly the former, e, is to be joyned with the Masculine or Feminine, and the latter, i, with

the Neuter.

9 When there cometh no nominative case between the Relative and the Verb, the Antecedent substan-

tive which the Relative rehearseth, or the Relative it selfe put Substantively in the Neuter Gender, shall be the nominative case to the Verb: but if otherwise it shall be governed of the Verb, or of another word in the same sentence, which tules the Interrogatives and Indefinites doe follow.

thantives of diverse genders, it may indifferently accord with either of them, as homines tuentur illum

globum, que vel qui, terra dicitur.

an Adjective, whether Noune, Pronoune, or Participle, you may put away, res, and put the Adjective in the Neuter gender, like a Substantive, and being so put, it may be the Substantive to the Adjective; and some time, when it hath not the English of the word, res, it is put Substantively in the neuter gender, as Multum lucri, Id operis, Quantum negotis,

When the English of the Infinitive moode (that hath Gerunds) cometh after any of these Nounes Substantives, Desire, Time, Leave, &c. it shall be made in the Gerund in Di, as Studium videndi, a desire to see, Licentia Nubendi, leave to be married &c. and likewise after certaine Adjectives, as Cupidus videndi, desirous to see, certus eundi, sure to goe. 16 The English of the same Infinitive moode; comming after such words as will admit of the signe for to be made by the Præposition ab, or propter; or the signe to, to be made by the Præposition, ad, as likewise a Verb of motion, or these words, Natus borne, Commodus, Utilis, prositable; Incommodus, Inutilis unprositable. Aptus, Idoneus sit, and it may be made by the Gerund in, Dum.

When you have this English must or ought, in a sentence, it may be made either by Oportet, debeo, or a Participle of the future in dus, with the Dative of the Agent, as Oportet me abire I must goe hence, Succumbere debet he ought to yeeld, Orandum est

mihi, I must pray.

18 Nounes that betoken part, or continuance of time, or space of place, may be put in the Accusative case, with the præposition expressed or understood.

That, is a Relative when it may be turned into

the English who or which.

That, is a Conjunction, when it is the English of quod or ut: It is the English of ut, when it comes after, so, or such, when it implies an end, when it comes after the English of Fac see thou, or Fit it comes so passe, or a Verb of intreating or commanding. It is the English of Quod, when it comes after any other Verb, and specially when it comes after the English of Nibilest there is no cause, or quidest, what is the cause.

3 That, is a Demonstrative when it is put with his Substantive for demonstration sake, as that man, that

of Motion, may be made in Latine seaven waies.

1 By the Infinitive moode poetically, as eo videre.

I goe to see. 2 By the Subjunctive moode, as eo ut videam.

3 By the Gerund in di, as eo videndi caufal. 4 By the Gerund in dum, as eo Videndum. 5 By the Adjective made of the Gerund, as eo ad videndos illos. 6 By the first tupine, as eo Visum. 7 By the Participle of the Future in rus, as eo visurus.

the more terrible, it must be made by these correspondent Adverbs, quo eo, tanto quanto, and the Comparative degree: as quo wel quanto erudelior, eo wel

tanto terribilior.

27 In such like English expressions as these (as for mee) it must be made in latine by the Relative quod, and any of these Verbs, Attinet, Pertinet, Speciat.

28 When (as much) is in the clause afore going, and (as) in the clause next following, the first mutt be changed into so much, and be made by Tantum as in this example, As much are we to regard our deliverance from dangers, as the collation of wealth and dignity upon our selves.

129 The English word (better) put without a Subflantive, and not coming after the English of Sum, is an Adverb; so the word most, put without a Sub-

stantive is the English of Maxime.

This word (being) doth imply foure things.

It is a figne of a case put by apposition in common nounces, as opes irritaments malorum, riches being the inticements, &c. 2 Of an Adjective either Nounce or Participle, as dignus being worthy, dollus being taught. 3 Of an Ablative case put absolute, severally as Augusto imperante, Augustus being Emperour; or joyntly with the Ablative case put by apposition, as me duce, I being Captaine. 4 Of a Gerund which is very seldome) which hath the Passive signification, as timor vapulandi the seare of being beaten: it may easily be discerned by the sence of the place, to which of these source heads any may be referred.

31 Every word ending in ing (being, only excepted) is either a Verball Substantive, or some other, as a Gerund or a Participle, which distinctly are thus discerned. If it be a Verball Substantive, or some other, it will admit of the signes (a) or (the) before it. If a Participle it is without signe.

Such, before an Adjective, is made by tam,

Of, after Propter, is part of its fignification, as propter hane rem, by reason of this thing.

29 It becometh, is ambiguous. It is the English of

fit, an intransitive, and decet a transitive.

The figne of the Infinitive moode implying an end, may be made better by the Subjunctive moode, as Bonofus did quaffe and drinke to the Embaffadors of purpose to make them drunke.

Having, immediatly before the English of the Participle of the præter tense, is a figne of the Accufative case governed of it by Synechdoche, as fultus

latus, having his side underpropped.

Him or his, Them or theirs, when there is no reciprocation or reflection, must be made in Latine by the oblique cases of Is, Ille, and sometimes Ipfe.

Reciprocation is when the Reciprocall Pronoune, reflects the action of the Verb upon it selfe, as upon the Agent, as Pater amavit filium fuum (i.) patria

qui amavit.

Reciprocation is made only in the continuance of the third person; the first or second cannot be intermixed with it, as we cannot fay Ego fui fecum, fed 1

In compound reciprocation (i.) such as is made with many verbs, when the action of the Verb sollowing is reslected upon the Person of the Verb soregoing, it is expressed by Sui, as Casarrogat me ut adseveniam (i.) Casarem rogantem. Rogat me ut sibi ignoscam (i.) sibi roganti.

In the Construction of two Verbs, which the Action of the latter passeth upon the person of the former, the Possessive Sum is used, as Rogat me ut sum (idest, ejus ipsius qui rogat) restituam filtum.

If English Authors would adde (selfe) to (him) and (owne) to (his) then the Reciprocall Pronounes might easily be discerned, and so accordingly used in making of Latines but the addition of these two words being often omitted, these rules are to be used to distinguish them from the oblique cases of is, ille, and sometimes ipse.

figne being, as Marcus, Tullius, Cicero.

An Active Participle in English, may be better made by the Passive Participle in Latine, the Substantive with which it agreeth, being put in the Ablative case absolute, as Hearing this they sted, not hoc audiens, but hoc audito sugerunt.

Whatfoever English expression comes not within the compasse of the rules of these directions, it must be untolded and explained, and then the difficulty and ambiguity either will easily be removed, or will aprly fall under one of these rules, as for example, He was one of Adrastus his chariot horses, this knot must be thus untied, He was one of the Horses of the Chariot of Adrastus.

PROSODIA.

O treat of Feet, Meeters and Verfes belongs to Poetry, not to Grammar, for without the knowledge of them, the pure Latine speech may be acquired: neither is writing verses the end of Prosodie, but right pronunciation, which is much furthered by the knowledge of the quantity of syllables. Now because the knowledge of the quantity of Syllables is the foundation of Poetry, and Poetry the approbation of the knowledge of the quantity of Syllables, it will not be amiffe to touch them both togither: partly that youth may be taught the beginnings of Poerry, and partly that the quantity of Syllables may be approyed, by the authority of the Poets: fo that it be remembred and acknowledged, that Verfifying is not of the essence of Grammar.

First of the quantity of Syllables: for of Syllables

are made Feete, of Feete Verles.

Quantity or time is the measure of pronouncing a Syllable. In which respect a Syllable is said to be

three fold, Long, Short and Commune.

If thou desirest to know whether a Syllable be Long or Short, thou must consider what Syllable of the Foote it is. If thou desirest to know the reason why it is long or short, thou must observe what Syllable of the word it is. In which regard, a Syllable is said to be three fold, First, Middle, Last, and every said to be middle save the first and the

The Generall rules that extend themselves to every Syllable, are foure in number Position, Dipthong, Composition, Synaresis.

Position.

A Vowell before two Consonants, or a double consonantisevery where long by Position in the same word, as Ventus, conjungunt, refert, axis, partis.

Position in diverse words, is when the former ends with a consonant, and the next word begies with a consonant, as Major sum quam sui possit fortuna notere, or when the former word ends with a short vowell, the next word begins with two consonants, as Occulta spolia es plures de pace triumphos, Virg. this way is not so usuall as the former.

An exception.

A Mute with the liquid, I, or r, in the same Syllable make a short vowell going before common, as Et primo similia volucri, mox vera volucris. Ovid. but a long vowell is not changed, as Aratrum, simularum, acrem, arrum.

Dipthong.

Every Dipthong with the Latines, is long in every syllable, as aurum Mecanas, musa: unlesse a vove-ellfollow as, praire Maontis, in diverse words as Implerant montes, sterant Rhodopeia arces. Ovid

Composition .

Words compounded not with Prapolitions of three

three syllables (for those belong to the middle sylable only) but with other parts of speech, doe follow the quantity of their simples, as scilicet, infidus, quamvis. Except semisopitus, of Sopitus, vides of vide, valedico of vale, magnistoquus of magni, causidicus maledicus of dico quando quando cunq ubiq ubilibet Ibidem, which have the middle long of Simples common, and quandoquidem short, siquidem of si.

Diminutives in olus, ola, olum, and ulus, ula, ulum, also verballs in ilis, and bilis, and Adverbs in itus, have the last save one thort, as filiolus, filiola, filiolum; servulus servula servulum; penfilis, stebilis, funditus, penitus.

Desideratives have the middle syllable short, as

Esurio, parturio, except fcaturio.

Every præterperfect tense ending in vi, or si, have the last save one long, as amavi, petivi, divisi.

Rimus and ritis in the præterperfect tense short,

in the Future tense long.

All Supines above two syllables have the middle long, as amatum, petitum, divisum, solutum, indutum. Except supines in itum, whose præterperfect tense end not in, ivi, as genitum, venditum, monitum, c.

Authority, being the testimony and warrant of the most approved Poets, which is the most profitable and surest way of all: for in words above two Syllables, when as the quantity of the last syllable save one, is known neither by the increase of the noune, nor by the analogy of the conjugation, nor the quantity of other middle syllables by derivation and composition, nor any other way, we presently sty unto authority, as our last, surest, and safest refuge.

The waies that respect the first syllable only, are

two, Præposition and Rule.

A præposition in composition retaines his quantity, as traduce, unles Position hinder, as addo, rejicie, or a vowell follow, as dehiscens, præustus.

Am, is long by ofition, unles it be changed into,

an,

an, and a vowell as anhelo:

Di, is made long, except in dirimo, and difertus.

con, also, unlesse it loose his n, a vowell following, as coarguo, coacervo, or change his n, into m, as comedo: for the ancients were wont to make m, in the end short, Eclipsis being omitted, which is yet retained, as circumago, circumeo.

Resis short, unlesse in refert, which (as some will have it) is compounded of the noune re, not of the

Przpofition.

Pro, also is long, except in these, Procello, procella, profugus, protervus, pronepos, profanus, profundus, proficiscor, profart, profugio, profecto, profestus. But these procumbo, procuro, profundo, propello, propulso, propago, whether noune or verb, have the first Syllable common. Greek words compounded with are short, as Propheta, prologus, Prometheus;

but pro in propino is common.

Rule- Every Præterperfect tense and supine of two syllables, hath the former long, as legi, emi, labum, motum, except sidi of sindo, bibi, dedi, setdi, steti, tuli, and quitum, situm, litum, itum, rutum, ratum, datum, satum, and citum of cieo, cies: for citum of cio, ciu, of the fourth conjugation, hath the former long. Verbs doubling the first syllable of the præterperfect tense, have the first syllable likewise short, as pëpendi, tetendi, totondi, momordi, pepedi, tutudi, feselli, tetigi, pupugi, didici. C.

Those Rules that pertaine to the middle syllable

only, are

i Composition in those words only that are compounded with prepositions of three syllables, for a preposition according to his notation must be set before, which makes the first syllable of the simple

word to be middle in the compound.

In Decompounds a przposition is made the middle, as indetibatus, inevitabilis, inexorabilis, irreparabilis. Compounds of this sort also doe follow the quantity of their simples, as Potens impotens, solor consolor, cado excido, cado excido, quaro acquiro, except innuba, pronuba a nubo, dejero, pejero a juro; perfidus a fidus.

The increase of the noune: those of the second special rule, have the last syllable save one long, as mos moris, virtus virtūtis, those of the third nave the last syllable save one short, as pes pēdis, sanguis

sanguinis.

The Analogy of the conjugation, a, in the first, e, in the second, i, in the fourth, are long, as amare, docere, audirese, in the third short, as legere, legereme. Except do, and his compounds when they are of the first conjugation, as damus, circundamus, dahine ir cundabis, dare, circundare.

Rules particular to the last syllable only.

Words ending in, a, are long, as am a, contra, erga.

A Foot is the setting together of two syllables or more, according to the observation of the quantity thereof. Feet (so farre as we intend to speak of here) are of two sorts. Disyllable. Spondaus, as Virtus. Pyrrichius, as, Deus. Trochaus, as, panis. Iambus, as aman, Trissyllable, Dastylus, as, scribere. Anapastus, as, piet as: Tribrachus, as Dominus. Feete being placed together in a just number and order doe make a Verse. A Verse is a speech made of a just and lawfull number of feet. He that will goe about to make a Verse, must first learne to measure it rightly by his feete, which men call Scanning. Scanning is the lawfull measuring of a Verse, into his severall feete.

Of the kinds of Verses.

The kinds of Verses that we are desermined to handle in this place are these, Hexameter, Pentameter, Asclepiade, Glyconicke, Sappbick, Phaleucian, Iambicke.

An Hexameter confifts of feete in number fixe, but in kinde two, of a Daffyl and a Spondey, the fift N 2 place doth peculiarly challenge to it felfe a Dady foote, the fixth a Spondey, the rest of the place this foot or that at our liberty, as

Tytire to parale recubant fub togmine fage. Ving A Spondey foote fometimes is found in the fift place, as w. .mb

Chara Deum Soboles, magnum Louis incrementum V.

The last syllable of every verse is common,

A Pentameter doth confirt of a double Penthemimer, the former whereof doth comptehend two feete, Dactyls, Spondeys or either of them, with a long fyllable: the other also two feete, but altogether Dactyls, as

Res eft Colliciti plena timoris amor. Ovid.

An Afelepiad confilts of a Spondey, Dactyl and a long fyllable, and then of two dactyls, as Mecanas atavis edite regibus. Hor.

A Glyconfek confifts of a Sponeley and two Da-

Etyls, as Sicte Diva potens Cypri.

A Sapphicke conlists of a Trochey, Spondey, Da. Ergle, and then of two Trocheys. In this kind of Verse, after three verses is added an Adonicke, which confifts of a Dactyl and a Spondey, as Integer vita, scelerisque purus.

· Non eget maura sacults, nec arcu, Nec venenatis gravida fagittis

Fusco pharetra. Hor.

A Phaleucian confifts of Spondey, Dactyl, and three Trocheys, as

Quod fis effe velis, nibilque malis. Mart. Summum nec metuas diem, nec optes. Idem.

A pure Iambicke Verfe is that which confifts only of lambicks: but it receives in the odde places, both nex an Iambick, and a Spondey sometime also, but sel- Mon

It is meete that is alwaies have two Iambicks: the odde places are first, third, fift: the even places, second, fourth, sixth. This Verse is divided into two kindes, a Dimeter or Quaternarie. Trimeter or Senarie, a Dimeter consists of source feet as, Suis periodit artibus

There are many more observations and exceptions about the quantity of syllables and Verses, but mine intent was here to give only a tast thereof for young beginners sakes, both because it is not of the Essence of Grammar, and chiefely because other authors, as Smetius, Butler, Pantaleon, Tigurinus, have written sufficiently of the same subject,
